

## PROTECTOR Flatwrap

**PROTECTOR Flatwrap** barbed tape entanglements are designed to form efficient physical barriers.

They consist of PROTECTOR Coils, laid flat in the form of overlaying coils.

Half-coil intersections are heat-sealed or clipped with special steel elements.

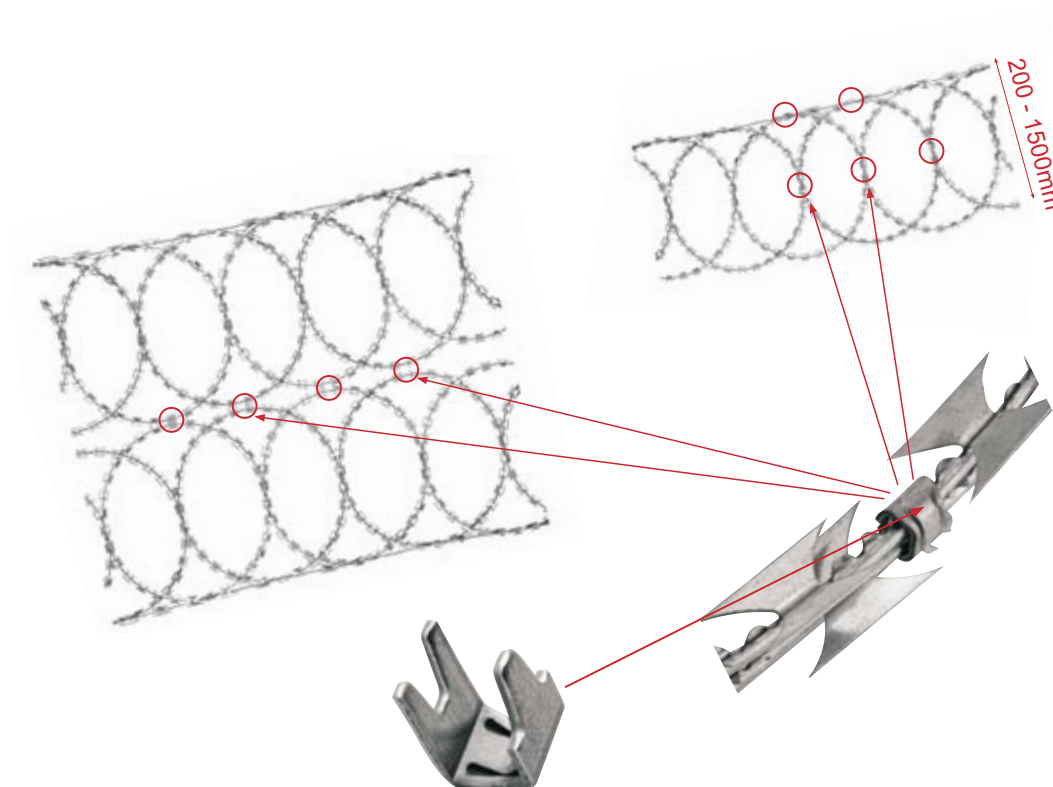

The clips are made of high-tensile galvanized steel tape.

The width of flat coils varies from 200 mm up to 1500 mm. It is possible to build structures of two, three or more **PROTECTOR Flatwrap** coils.

**PROTECTOR Flatwrap** can be reinforced on its outer edges with the straight sections of PROTECTOR Coil.

**PROTECTOR Flatwrap** coil strips are delivered in rolls of different lengths. The only limitation is related to logistic and assembly possibilities.

# PROTECTOR Flatwrap

The entanglements can be used as PROTECTOR Mobile Barrier or installed on the ground or on other existing fences.

The most significant **PROTECTOR Flatwrap** feature is the ability to maintain its structure even if the system is cut in one or more points.

**PROTECTOR Flatwrap** is one of the best intrusion protection systems.

Depending on the level of aggressiveness there are three types of blades:

- PROTECTOR Short
- PROTECTOR Medium
- PROTECTOR Long

**PROTECTOR Flatwrap** can be assembled with hand tools or special pneumatic devices.
