

PROTECTOR Net

PROTECTOR MEDIUM

Large-format **PROTECTOR Nets** are efficient and very aggressive obstacles in the form of flat nets, composed of straight segments of PROTECTOR Coil, forming rhombus-shaped openings 150 x 225 mm.

All intersections of suitably placed segments are firmly joined with innovative spot-welding. This innovative method does not break the galvanized layer of the combined elements. Maximum dimensions of intersecting elements are: up to 6 000 mm in width and up to 4 000 mm in height.

The nets can be delivered in rolls of a diameter of 800 - 850 mm, maximum 4 rolls on one pallet.

A wide range of bent nets, based on **PROTECTOR Net**, installed mainly on fences in order to increase their efficiency are offered.

PROTECTOR Medium

Nets are installed on standard fencing elements, such as posts. There are minimum 3 rows of wire stretched between the fencing posts. **PROTECTOR Nets** are attached to the fencing using special galvanized steel clips. The assembly is possible with the use of hand tools or special pneumatic devices.

PROTECTOR Nets can be additionally equipped with the PROTECTOR Barrier entanglements.
